SaveOnEnergy.com Announces Aggressive Expansion into Northeast

DALLAS, TX — *SaveOnEnergy.com*[®], one of the longest-standing online energy comparison websites, announced its plans April 4 to expand its service area in the Northeast.

For the past decade, the company has operated as a marketplace where consumers and businesses can shop for electric and natural gas rates in competitive deregulated markets, largely in Texas. Now, *SaveOnEnergy.com* will have a larger presence in Ohio, Pennsylvania, Illinois, New Jersey, Maryland, New York, Washington, D.C., Connecticut, Massachusetts, Delaware and Rhode Island.

"Although our main focus has been in Texas for the last decade, we have dipped our toes in the water in the Northeast," said Brent Moore, founder and president of SaveOnEnergy.com. "Now we're implementing an aggressive expansion into deregulated markets in the Northeast to provide consumers and businesses a convenient place to shop for competitive energy rates."

SaveOnEnergy.com will concentrate its marketing efforts in the region, add educational resources to its Learning Center and work on expanding its offering of suppliers and products in the Northeast.

By using the website, customers can quickly compare electric or natural gas rates from a number of the industry's top suppliers. *SaveOnEnergy.com* partners with a number of leading retail suppliers including TXU, Direct Energy, Just Energy, Bounce Energy, Constellation and Champion Energy Services. Through these partnerships, the site is able to offer exclusive rates that can't be found anywhere else.

Sometimes shopping in a competitive marketplace can bring in significant savings. In Chicago, for example, residential customers can either choose to pay Peoples Gas rates—\$1.19 per therm for natural gas in April—or shop on a marketplace for more competitive pricing. *SaveOnEnergy.com* has natural gas rates in the area as low as 66 cents per therm. New York State Electric & Gas in New York offers a variable rate of 8.3 cents per kWh for electricity, while the same customers can choose to purchase a fixed-rate product from *SaveOnEnergy.com* for as little as 7.3 cents per kWh.

About SaveOnEnergy.com

SaveOnEnergy.com has built a reputation as an exceptional resource for all energy consumers by

partnering with many of the most popular retail energy suppliers in the industry. Since its creation in 2003, *SaveOnEnergy.com* has helped millions of residential and commercial shoppers find a great rate on electricity and/or natural gas.
